

GO-LIVE AUTHORIZATION

Production Deployment Approval — Signed

This Go-Live Authorization (the "Authorization") is executed as of _____ (the "Authorization Date") by and between **One Smarter, Inc.**, a corporation with its principal place of business in Dayton, Ohio (the "Company"), and _____, with its principal place of business at _____ (the "Client"). This Authorization records the Client's formal approval to place the system identified below (the "System") into live production operation.

The System was developed, configured, and/or implemented by the Company for the Client in connection with information technology consulting, software development, and related professional services. The Parties have completed the readiness activities described below and, on the basis of those activities, the Client hereby authorizes the production go-live of the System on the schedule set out in this Authorization.

1. System and Release Identification

This Authorization applies to the following System and release: System name: _____; Release or version: _____; Production environment: _____. This Authorization covers only the System and release identified above. Any subsequent release, module, or material change to the System shall require a separate authorization unless the Parties agree otherwise in writing.

2. Readiness Criteria Completed

Prior to execution of this Authorization, the Parties have confirmed completion of the following readiness criteria: (a) user acceptance testing has been performed by the Client and the results have been accepted in writing; (b) security review activities applicable to the release have been completed and findings requiring remediation prior to go-live have been resolved or formally accepted; (c) data migration, where applicable, has been executed and validated against the agreed reconciliation criteria; (d) backups of the affected environments have been taken and verified; (e) a rollback plan has been documented and reviewed by both Parties; and (f) production access, monitoring, and support arrangements are in place.

3. Go-Live Schedule and Cutover Window

The production go-live shall commence on _____ at _____ and the cutover window shall conclude no later than _____, unless extended by mutual written agreement of the Parties' designated representatives. During the cutover window, the Company shall execute the deployment and cutover activities in the agreed sequence, and the Client shall make available the personnel and access necessary to complete verification. The go-live shall be deemed complete upon the Client's confirmation of the post-deployment verification checks.

4. Roles and Responsibilities

The Company is responsible for executing the deployment, performing technical verification, and providing the support described in Section 6. The Client is responsible for business verification, end-user communication, and the timely availability of its designated representatives during the cutover window. Each Party shall designate a go-live coordinator with authority to make decisions on its behalf during the cutover window, including the decision to proceed, pause, or invoke the rollback plan.

5. Rollback and Contingency

If, during the cutover window, either Party's coordinator determines that the System cannot be placed into stable production operation, the Parties shall invoke the documented rollback plan and restore the environment to its pre-deployment state. Invocation of the rollback plan shall not, by itself, constitute a breach of any agreement between the Parties. Following any rollback, the Parties shall jointly review the cause, agree on corrective actions, and schedule a new go-live date, which shall be recorded in a revised authorization.

6. Post-Go-Live Support

For a stabilization period of _____ following completion of the go-live (the "Hypercare Period"), the Company shall provide heightened support for the System, including expedited response to production incidents attributable to the release, monitoring of agreed operational indicators, and regular status communication to the Client. Upon conclusion of the Hypercare Period, support of the System shall transition to the standard support arrangements in effect between the Parties.

7. Known Issues and Accepted Risk

Any open items, known issues, or deferred findings existing at the time of this Authorization are listed in the attached schedule of known issues, together with their agreed disposition and target resolution dates. By executing this Authorization, the Client acknowledges the listed items and accepts the associated residual risk of proceeding to production with those items open. Items not listed remain subject to the warranty and support terms of the Parties' services agreement, which this Authorization does not amend.

8. Confidentiality

This Authorization, its schedules, and the deployment and configuration details referenced herein constitute Confidential Information under the confidentiality agreement in effect between the Parties and shall be handled accordingly.

9. Authorization

By signing below, the Client's authorized representative confirms that the readiness criteria in Section 2 have been satisfied or formally waived, approves the go-live of the System on the schedule set out in Section 3, and authorizes the Company to proceed with the production deployment. The Company's signature below confirms its readiness to execute the deployment and to provide the support described in this Authorization.

IN WITNESS WHEREOF, the Parties have executed this Authorization as of the date first written above.

Date of Authorization: _____
